

TitleBax

1. Introduction

TitleBaX is a collection of graphics containing 100 motives specifically designed as back-grounds for titling, but they are also of interest for use in other software products.

The motives offer a large selection of varying abstract and unique graphic colour borders that can be positioned at the lower part of the screen.

Many pictures also contain emphasised areas that can be used to position and highlight texts.

Pictures from TitleBaX can be used in other software too, like PiP-Studio, Motion 3D, Caladan or Akaba.

2. Using TitleBax

The images can be used in all programs or parts of those programs that support the Casablanca ImagePool.

As the masks do not utilize the full video resolution, some software 'tiles' them or displays them enlarged,

To be able to position TitleBaX graphics on a scene, simply use "TitleBaX" either as an Image Processing effect across a scene in the Storyboard or via "Edit", by applying them as a "Special" effect on a scene in the edit bin.

3. "Select Pattern"

Clicking onto this button opens the selection window of the imagepool, in which you can see all "images".

Choose the product "TitleBaX" for displaying the included images.

"Mode" allows you to mirror the images horizontally and/or vertically or to use the image as a negative one.

4. "Colorize"

Use the "Colorize" button to enter the menu for altering the patterns. You can change the colour tone and settings to affect the picture. The available parameters for the pattern vary according to the installed Smart Edit (i.e. Smart Edit 3 or 4) version.
